THESIS ADVISER CONSULTATION SCHEDULER

Concept Paper

Kilo Student, Lima Student, Mike Student, Golf Student
WD-401 (Capstone 1) → WD-401 (Capstone 2) · Adviser: Prof. Alpha · Instructor 1: Prof. Bravo

Background of the Study

Capstone groups meet their advisers weekly, yet most consultations are arranged through group chats and personal messages. Advisers who handle several groups receive overlapping requests, meetings are missed when a message is buried, and neither side keeps a reliable record of what was agreed.

A scheduler that lets the adviser publish available slots and lets each group book one would remove the back-and-forth, remind both sides before the meeting, and keep a short record of every consultation that the group can refer to when it revises its work.

Statement of the Problem

Consultation requests arrive through several channels, meetings are double-booked or forgotten, and no shared record of consultations exists.

Objectives

The study aims to develop and evaluate a web-based consultation scheduler for capstone groups and their advisers. Specifically, it aims to:

1. analyze how capstone consultations are currently requested, scheduled and recorded, and identify the problems;
2. design and develop a system in which advisers publish consultation slots and groups book, cancel and reschedule them;
3. send email reminders to the group and the adviser one day and one hour before each consultation;

4. keep a consultation record with the topics discussed and the agreed next steps, exportable per group; and
5. evaluate the system using ISO/IEC 25010 and the System Usability Scale.

Scope and Delimitations

The system covers consultations between capstone groups and their advisers in the School of Computing. Advisers publish weekly availability; a group may hold one upcoming booking per adviser at a time. Reminders are sent by email only.

Proposed Method

The group will gather requirements from the intended users, develop the system in two-week Scrum sprints, and evaluate it with ISO/IEC 25010 and the System Usability Scale.

Expected Output

Thesis Adviser Consultation Scheduler and Evaluation results.
