Browsers tested	Chrome 1xx, Safari 1x (iOS), Firefox 1xx
Known limitations	Add a text-to-speech call on the public display.

Deployment steps

1. Clone the repository and copy .env.example to .env with the Firebase project settings.
2. Run npm install and npm run build.
3. Deploy with firebase deploy --only hosting,functions,firestore:rules.
4. Seed the reference data with npm run seed -- --confirm.
5. Smoke-test the live URL with the functionality checklist.

All URLs and identifiers are placeholders; they do not point to a real deployment.

DUMMY — FOR TESTING
